FIRMWARE FAULT

\$699*

HARDWARE FAULT

\$1099*

Accidentally
deleted
files

Cracked
head,
deadhead

Bad
Sectors

Scratch or
drive have
weird noise

Unable
to detect

**Price valid for HDD recovery only.
SSD data recovery available at separate prices.*

Do's:

Do try to back up important data on a daily or weekly basis

Do try reconnecting external drive to other working system

Do turn off system, when hear any clicking / grinding noise from hard disk

Do install an effective antivirus program to scan and remove viruses

Don'ts:

Don't make attempts to recover lost data by yourself

Don't store new files after data loss as this can overwrite the deleted / lost files

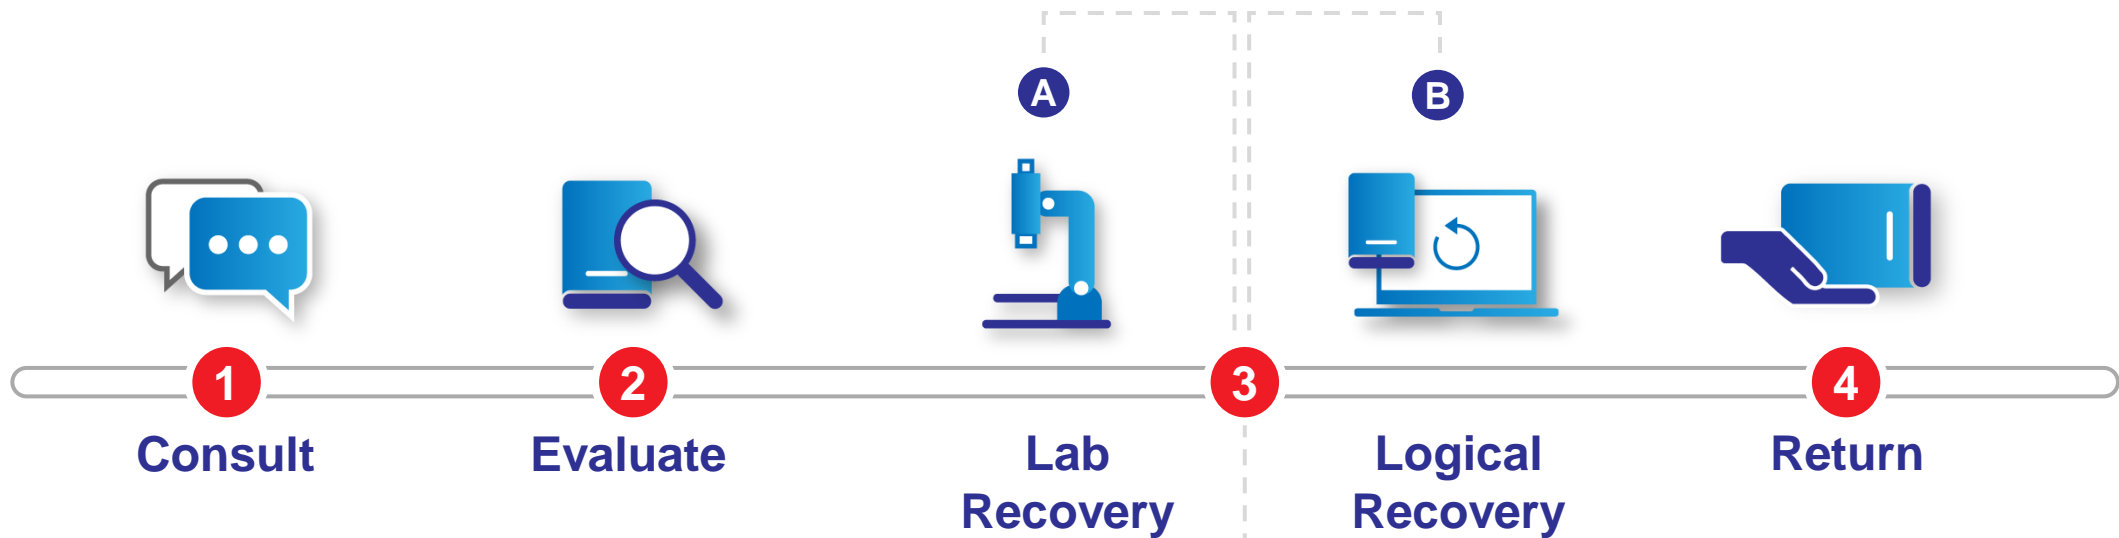

Don't try to open up physical damaged hard disk

Don't place hard disk in freezer and then try to spin it up

Recovery Process:

Should we be unsuccessful in recovering the data you need due to severe media damage; you won't be charged a recovery fee.

F.A.Q

Q. Can all lost data be retrieved?

A. There are occasions when damage to the data is permanent and a complete recovery is not possible. However, it is rare that absolutely no data is retrievable.

Q. What is the turnaround time for data recovery?

A. Turnaround times vary and depend on many factors, including:

- The degree to which the data is fragmented or corrupt
- The degree of media damage and how long it takes to read the entire drive to make a mirror image

Q. What is Logical Recovery?

A. A fully working hard drive, where data was lost due to accidental user actions, a crash by an application or the OS, or even partitioning/formatting of the hard drive by mistake.
